Text Cleaning Basics

README — Data Analytics Track

This project demonstrates basic text cleaning in Excel by standardizing customer names and city names, removing extra spaces, and presenting before-and-after examples.

Objectives

• Remove leading, trailing, and repeated spaces from text.
• Standardize capitalization for customer names and city names.
• Compare original values with cleaned results.

Tools Used

• Microsoft Excel
• Excel formulas: TRIM and PROPER

Cleaning Process

1. Enter the customer dataset with CustomerID, name parts, and city.
2. Clean names using:
`=PROPER(TRIM(B2))&" "&PROPER(TRIM(C2))`
3. Clean city names using:
`=PROPER(TRIM(C2))`
4. Fill formulas down for all records.
5. Add before-and-after examples and save the workbook.

Example Results

Original text	Cleaned text
rahul sharma	Rahul Sharma
PRIYA SINGH	Priya Singh
amit kumar	Amit Kumar
NEHA VERMA	Neha Verma

Key Learning

TRIM removes extra spaces, while PROPER converts text to title case. Verify that each formula references the correct source column before filling it down.

Deliverable: A cleaned customer dataset with before-and-after text examples.
